SauceDemo Automation Testing Project

Project Objectives:

This project aims to automate the functional and UI testing of the SauceDemo e-commerce website to ensure its stability and reliability. The primary goals include:

- Automating test cases for critical workflows such as login, product selection, and checkout.

- Performing functional testing using Selenium with TestNG in Java.

- Conducting performance testing using JMeter.

- Implementing bug tracking and test case management in Jira.

- Generating detailed reports on test execution and results.
